

Liquid Tanker Collection System

SITA Environmental Solutions Liquid Tanker system is ideal for commercial, industrial, retail, and domestic customers who generate any form of bulk liquid or sludge waste.

Typical applications for this system include restaurants, vehicle or mechanical equipment wash facilities, households and any other industrial pit or tank clearing operation.

The Liquid Tanker system is generally operated by a vacuum tanker that ranges in capacity from 8,000 litres to 22,000 litres depending on location and configuration.

Printed on recycled paper using environmentally friendly soy-based inks.

All trucks and drivers are licensed by State EPA's to carry all types of non hazardous materials that include -

- Grease Trap waste
- Triple Interceptor Trap waste
- Septic waste
- Prescribed Industrial Liquid wastes
- Oil and oil/water mixtures

These wastes can be easily and conveniently removed from the relevant trap, tank or pit and securely transported to a licensed disposal or recycling facility if necessary using State EPA waste transport tracking documentation.

'The Liquid Tanker system is ideal for commercial, industrial, retail, and domestic customers'

Our Liquid Tanker system compliments other collection services such as our Front Lift and Rear Lift systems, allowing customers to engage SITA to provide an all-round environmental service.
