

# Garden-ARRT™

## enhancing your garden's sustainability

Garden-ARRT™ composted products **promote and sustain** healthy plant growth in new garden beds and existing landscapes. By **improving moisture retention** and aeration of the soil, **plants are hardier** and can better withstand the stresses associated with drought and disease.

**SUEZ environnement\* is one of the largest processors of urban-generated organics in Australia.**

Our network of state-of-the-art facilities manufacture and deliver quality composted products to home gardeners, local councils, and customers in horticulture, agriculture, mining, civil works, commercial landscaping and sports turf management.

Our soil sustainability philosophy starts with raw materials, such as recycled organics generated in Australian households and businesses, and

ends with the production of quality products that are manufactured to the needs of the soil system to which they are applied.

By returning organic matter to the soil, SUEZ environnement delivers responsible, sustainable resource recovery and recycling solutions that balance environmental, community and economic outcomes.

Our composts provide an environmentally responsible alternative to chemical fertilisers and 'close the loop on resource usage'.

### Garden-ARRT™ composted products

- Increase organic matter levels
- Improve soil moisture retention and availability
- Increase soil organic carbon
- Increase soil nutrient holding capacity
- Reduce leaching and loss of soil nutrients
- Improve the physical properties of soil, including its structure, friability and permeability
- Enhance soil microbiology
- Decrease the need for artificial fertilisers
- Enhance overall soil health

\*SUEZ environnement recycling and waste recovery (referred to as SUEZ environnement) (ABN 70 002 902 650) is the new business name of SITA Australia Pty Ltd. SITA Australia Pty Ltd is part of the SUEZ environnement global group of companies.

# Garden-ARRT™ product range

We create a **specialised range** of composted products to suit a **variety of applications**

## Premium Garden Mix

### Overview

- AS4419 certified manufacturer
- A premium, nutrient-rich compost blend manufactured using recycled organics and VENM screened sand
- Suitable for commercial and domestic landscaping applications
- Typical low phosphorus makes this product suitable for many native species. Please refer to manufacturer before using for highly phosphorus sensitive plants
- Suitable for a broad range of garden applications

### Application

- Remove weeds, unwanted plants and debris prior to application
- Recommended spreading of 100mm to 300mm onto existing or new garden beds prior to planting
- Typical low phosphorus makes this product suitable for many native species
- Water well after completion of planting

Product not suitable for topdressing lawns.  
Please use Organic Top Dress.

## Organic Garden Mix

### Overview

- A blend of composted products high in organic matter, beneficial microbes, nutrients, VENM screened sand and composted manure
- Ideal for commercial and domestic applications
- Recommended for fruit, vegetables, exotic plants, herbs and flowering annuals
- Specially blended soil replacement for landscaping and gardening applications

### Application

- Remove weeds, unwanted plants and debris prior to application
- Recommended spreading of 100mm to 200mm onto existing or new garden beds prior to planting
- Product may not be suitable for the growth of Australian natives
- Water well after completion of planting

Product not suitable for topdressing lawns.  
Please use Organic Top Dress.

## Soil Improver

### Overview

- AS4454 certified manufacturer
- Compost is available in various screened fractions
- Ideal as a soil ameliorant and for improving neglected soils
- Suitable for landscaping and gardening purposes
- Developed from the composting of organic material and used in all product blends in its pure form (compost)

### Application

- Remove weeds, unwanted plants and debris prior to application
- Recommended spreading of 50mm to 75mm across existing soils and incorporated into soil either mechanically or by hand prior to planting
- Can be used as a mulch up to 100mm
- Water well after completion of planting

Product not suitable for topdressing lawns.  
Please use Organic Top Dress.
