

# Lawn-ARRT™

## establish and maintain greener healthier turf

Lawn-ARRT™ composted products **promote and maintain** grass growth on home lawns, parks and ovals, sporting fields and golf courses. By **improving moisture retention** and aeration of the soil, **grass is hardier** and can better withstand the stresses associated with droughts and excessive use throughout the year.

**SUEZ environnement\* is one of the largest processors of urban-generated organics in Australia.**

Our network of state-of-the-art facilities manufacture and deliver quality composted products to home gardeners, local councils, and customers in horticulture, agriculture, mining, civil works, commercial landscaping and sports turf management.

Our soil sustainability philosophy starts with raw materials, such as recycled organics generated in Australian households and businesses, and

ends with the production of quality products that are manufactured to the needs of the soil system to which they are applied.

By returning organic matter to the soil, SUEZ environnement delivers responsible, sustainable resource recovery and recycling solutions that balance environmental, community and economic outcomes.

Our composts provide an environmentally responsible alternative to chemical fertilisers and 'close the loop on resource usage'.

### Lawn-ARRT™ composted products

- Increase organic matter levels
- Improve soil moisture retention and availability
- Increase soil nutrient holding capacity
- Reduce leaching and loss of soil nutrients
- Improve the physical properties of soil, including its structure, friability and permeability
- Enhance soil microbiology
- Decrease the need for artificial fertilisers
- Reduce soil compaction over time
- Enhance overall soil health

\*SUEZ environnement recycling and waste recovery (referred to as SUEZ environnement) [ABN 70 002 902 650] is the new business name of SITA Australia Pty Ltd. SITA Australia Pty Ltd is part of the SUEZ environnement global group of companies.

# Lawn-ARRT™ product range

Our recycled organic products can be manufactured to suit your requirements, with **custom blends** available in **commercial quantities**

## Organic Top Dress

### Overview

- Specifically designed for ovals, sports fields and residential lawn rejuvenation
- A premium blend of screened compost fines, manure and VENM screened sand creating a balanced, nutrient-enriched topdressing media
- Contains a high level of organic matter and composted manure, sources of immediately available and slow-releasing nutrients
- Organic Top Dress assists with levelling, adds organic matter to the soil profile, which improves structure, can relieve compaction, boosts wear tolerance and water holding capacity

### Application

- Ensure turf is mowed prior to spreading
- Recommended spreading by hand or spreader machine to a depth of 10mm to 20mm ensuring a third of the leaf blade is visible after spreading
- Once spread it is recommended that Organic Top Dress is raked or brushed into turf and watered well

## Organic Turf Underlay

### Overview

- A high quality, specifically designed blend of VENM screened sand, composted organics and manure
- Ensures a healthy start to your lawn's life, providing the nutrients and elements required for strong root growth and moisture retention
- Enables easy surface levelling

### Application

- Remove existing vegetation, weeds and stones
- Recommended spreading to a minimum depth of 50mm up to 150mm
- Water well after laying turf
- Apply a lawn turf fertiliser if required

Product not suitable for topdressing lawns. Please use Organic Top Dress.

## Soil Improver

### Overview

- AS4454 certified manufacturer
- Compost is available in various screened fractions
- Ideal as a soil ameliorant and for improving neglected soils
- Developed from the composting of organic material and used in all product blends in its pure form (compost)

### Application

- Recommended spreading of 50mm to 75mm across existing soils and incorporated into soil either mechanically or by hand prior to planting
- Products must be well watered immediately after application

Product not suitable for topdressing lawns. Please use Organic Top Dress.
