

# FACT SHEET

## Hampton Park Facility

From Wednesday 1 June 2011, for the next two to three weeks, SITA Environmental Solutions (SITA) will be conducting a drilling program to install additional gas extraction wells to the landfill area of the Hampton Park Facility in Hallam Road. These wells will assist with the management and future reduction of odour emissions.

During the drilling program, facility neighbours may experience some odour. SITA will actively minimise these odours by:

1. All waste that is excavated during the drilling process will be removed and covered immediately.
2. All drilling works that are commenced on any given day will be completed on the same day to ensure no venting of wells.
3. A biodegradable odour neutralising agent will be used to spray the immediate area while drilling and installation works are being undertaken.
4. The entire drilling and installation program will be completed in the shortest possible period to minimise any impacts.

A poster providing this information has been placed at community hubs such as shopping and community centres and this information has been mailed or emailed directly to those neighbours registered on the Community Contact Database.
