

# FACT SHEET

23 June 2011

## Hampton Park Facility

Since 1 June 2011, SITA Environmental Solutions (SITA) has been conducting a drilling program at the Hampton Park Facility in Hallam Road to install additional gas extraction wells to the landfill area.

As of Thursday 23 June 2011, SITA advises that :

- The drilling program is now complete and all 14 vertical extraction wells have been installed
- The gas collection pipework has been welded, laid into position and connected to the vertical extraction wells
- Unfortunately, there has been a delay in the delivery of the critical connection fittings to join the new collection pipework to the current landfill gas management system. These fittings are expected to be delivered early next week, which will allow the works to be completed within one day of the fittings being received.

Once connected to the gas management system, gas from these wells will increase the current contribution of green power to the Victorian network from 4,500 homes to supplying electricity to 6,000 homes. The upgraded gas extraction system will also assist with the management and future reduction of odour emissions.

This information has been uploaded to the SITA website at [www.sita.com.au](http://www.sita.com.au).
