

# FACT SHEET

7 June 2011

## Hampton Park Facility

Since last Wednesday 1 June 2011, SITA Environmental Solutions (SITA) has been conducting a drilling program at the Hampton Park Facility in Hallam Road to install additional gas extraction wells to the landfill area.

As of Tuesday 7 June 2011, SITA advises that :

- the gas well drilling program will be completed by close of business today;
- a total of 14 gas extraction wells have been drilled; and
- a works crew will be mobilised to the Hampton Park site early next week to connect the new wells to the landfill gas generator and flare system. Works should be completed by Monday 20th June 2011.

Gas from these wells will contribute enough green power to the network to supply electricity to 6,000 homes and will assist with the management and future reduction of odour emissions.
